

Specialised services and market benefits for AGRO customers

Accredited test laboratory

Our test laboratory is certified by Electrosuisse and tests cable glands and electrical conduits to the current European test standards.

The AGRO test laboratory is able to carry out tests to customers' specific requirements.

www.agro.ch Internet Services

Our customers have access to the following tools on our website

- Latest product catalogues
- Installation instructions
- Design and assignment schedules for light fittings and loudspeaker cabinets, for example
- Comparison charts for cable glands
- E-Shop

2D or 3D/CAD product data

2D or 3D data on cable glands and accessories can be downloaded directly onto your computer in the required format.

You can register to use the 2D or 3D database free of charge just by logging onto our website.

Tailored solutions

AGRO AG is the specialist for tailored solutions.

Ask our customer advisor!

Quality products for the electrical trade and industry

Cable glands

- Nickel-plated brass, stainless steel A2 or A4, plastic
- All common thread types
- Sealing inserts for single or multiple cable entries
- Accessories
- With gripping clamps, "trumpet" sliding clamps or anti-kink protection
- For EMC applications
- For explosion-proof equipment to ATEX 95
- Solutions to customers' requirements

Cable management systems

- Plastic conduit and quick connectors
- Protective metal conduit
- Protective metal conduit – liquid-tight
- Plastic conduit made from polyurethane etc.
- Braided conduit

Installation material

- Surface mounting junction boxes in various sizes and colours
- Telescopic equipment mountings
- Halogen-free surface mounting junction boxes
- Halogen-free tubes and flexible conduit inc. accessories

AGRO ... your quality-connection!

We are committed to supplying products with outstanding customer benefits. The customer should see each contact with AGRO as a quality connection – regardless of the problem to be solved.

We value advice and partnership very highly. Working closely with our distributors, we make sure that the benefits of our know-how and experience are passed on to our customers worldwide.

The AGRO brand has stood for high quality for more than 50 years. AGRO achieved ISO 9001 certification in 1993 and in 2001 successfully worked towards ISO 9001:2000 certification. AGRO guarantees product and service quality for the future too, as can only be expected by our customers.

Quality-connection equally in product design

Since the company was established, AGRO has worked with numerous customers and suppliers. In partnership with the parent company, KAISER, a team of more than a dozen engineers and designers develop innovative products on a daily basis for customers in the electrical trade and industry.

Flexibility and speed

Developing customised solutions is all in a day's work for our design team. They can draw on a wide experience of applications and well thought-out modules. As a result, AGRO has for years set the standards for speed and flexibility, from initial inquiry, through advice, up to final delivery.

Distributors with professional competence

AGRO provides training for its distributors to ensure that every customer contact becomes a «quality connection» and that, in every case, the product used is the ideal one to meet the requirements.

Committed to the environment and ethical working principles

AGRO is very aware of its environmental protection responsibilities; we work on the principle: «we didn't inherit the Earth from our parents, we borrowed it from our children.»

In addition, for many years, by placing orders with various disabled workshops, AGRO has helped to ensure that the underprivileged too can participate in gainful employment.

AGRO
... your quality-connection!

AGRO has been designing and producing equipment in Switzerland for more than half a century

The AGRO AG company was established in 1953, in Hunzenschwil (Switzerland). The purpose of the company is to manufacture and market electrical products. 90% of all our products are designed in-house and produced in Switzerland.

The company's location in the metropolitan area of Zurich, close to the airport, enables fast delivery to neighbouring countries or overseas.

In 2002, the company was taken over by Kaiser GmbH & Co. KG, the German market leader for concealed, hollow-wall and concrete electrical installation materials, as well as enclosures for light fittings and loudspeakers, based in Schalksmühle.

Working together with the German parent company, KAISER GmbH & Co. KG in Schalksmühle, ensures sustainable and continuous development.

More than 10,000 products for industry and the electrical trade available from stock

Our customers can rely on AGRO's high product availability and quick delivery response, thereby significantly reducing their stockholding costs.

AGRO is one of the leading Swiss suppliers of solutions for laying, installing, and protecting cables in the construction of machines, equipment, plant and railway vehicles. The core product range is made up of cable glands and cable entries. The very first patent for a cable gland was awarded to the founder of AGRO in 1953. Today, more than half the cable glands supplied by the company are exported. Cable protective conduits and a full range of accessories complete the product range.

In the field of electrical installation products, the AGRO name stands for products which make it easier for electricians to carry out efficient and professional first and second fixes, and which contribute to safe, long-lasting electrical installations in industrial and residential construction. Innovation is AGRO's trademark, as a manufacturer of non-conductive and non-switching electrical installation material.

Comprehensive stocks and the wide, specialised product range available enable AGRO customer advisors to offer the right product for practically every job to be tackled, or, working together with the customer, to come up with a suitable solution.

AGRO is innovation

Vision, innovation, technology, benefits - for us, these core statements are basic requirements for market success. The focus of the AGRO strategy is well defined: innovation leadership!

Over sixty patents underline this claim. AGRO designs on the principles of sustainability and environmental compatibility.

Shared success in the market

AGRO customers benefit from 50 years of experience. Products and business processes have been and will continue to be oriented towards customers' needs. Market requirements are the starting point for the development of more innovations and electronic aids.

AGRO's declared aim is to be your innovative and preferred supplier! Your success is our success.
