

HASBERG-Protective vice jaws

in rods of 1 m for do-it-yourself cutting
made of plastic or light metal,

in sets made of light metal
with retaining springs.

HASBERG Protective vice jaws in rods

1 m in length offers substantial advantages:

Suitable jaws for every vice! You can cut the jaws you need from the rod as you need them.

This also simplifies storage: you just have a couple of meters of Hasberg protective jaw material on hand, not dozens of individual jaws for a variety of vices. But most importantly: buying by the meter is much less expensive!

HASBERG Protective vice jaws in rods are available:
made of light metal: compressed (not cast), providing a smooth surface and a dense, homogeneous microstructure free of cavities;

and made of plastic: softer than light-metal, but featuring negligible deformation, tested on-the-job in many workshops and preferred by many customers.

HASBERG Protective vice jaw sets made of light metal (plastic not available) have pressed retaining springs, so they remain firmly in place on any vice and do not fall off.

Available sizes:

Rods of 1 m for do-it-yourself cutting made of plastic or light metal.

Pricing:	US\$/1 m pc
light metal	\$14.55
plastic	\$12.63
