

## PARTserver becomes PARTcommunity

Do you use CAD data from our website? Then it is time we tell you about our new interface: the PARTcommunity. Here we explain what is new and what you need to be aware of.

If you have tried to access SERTO CAD data on the PARTserver portal since 7th December 2009, you will have noticed that you were forwarded to a new user-interface.

The new portal is called PARTcommunity and features the following improvements:

- fast full-text search
- obtaining CAD data via download now possible
- browse through catalogues without registration or login
- more user-friendly and better overview
- download 3D PDF datasheets
- improved performance

### What do you need to do?

- Actually nothing, simply copy this link <http://serto.partcommunity.com> in your browser and surf away
- if you set a direct link to the old PARTserver in your browser, then you should change the Web address to <http://serto.partcommunity.com>
- Because the PARTcommunity is a completely new platform, you need to re-register prior to the first download.

Have fun with the new PARTcommunity!!

### The new start page:
